

Gamecard carding method

Hey fellow! I am greenghost. And I will be teaching game card carding. As we all know giftcard sites are hot cakes for carders and that has caused high anti-fraud security. So we will be focusing on game cards while they are busy protecting giftcard.

Requirements:

1. USA cc
2. Talkatone app
3. VPN/Socks5

Steps:

1. Download Talkatone app. You will use this app to get USA non - VOIP number for verification. It's best if it has same area code as cc holder phone number.

2. You need two VPN - one for carding and the other for accessing Talkatone if you are not in USA. You can use any vpn you trust for carding but you must use either solo VPN or lion VPN to access Talkatone app except you are using 911.re proxy. If you are using 911.re then you don't need VPN anymore.

Note: the reason you need two VPN is that only solo and lion VPN can access Talkatone but non of them is good for carding.

3. After making sure whoer.net score you 100% go to kinguin.com and create an account. Make use of outlook email while creating account. Browse around the site for at least 15minutes. While browsing around don't forget to read their policy, read their reviews. It's necessary in order to avoid red flag. Then add a PlayStation card to cart it must not exceed \$100 else you will need to call to confirm your order. By this time make sure you've added the number you got from Talkatone to your account.

4. Logout. It is a must that your IP address should not change while login back.

5. Add your cc details and pay for the game card. Within a few minutes it will arrive in your email.

6. Go and sell it on either raise or paxful.

That's all. This my free tutorial. If you need tutorials that will earn you more. Simply contact me on telegram but it's not free. My tutorials cost only \$6.
