Fake

Importend: don't use this guide for an old X2, IT WILL NOT WORK!

If you have an outdated X2, update first and use this guide.

This guide is for the first page on the software, if you want to copy a card ask me on jabber or icq for support.

- For pos you only need track 2, If you want to use this for atm then you need the real pin.

Lets begin:

1: Enter track 2. If this gives an error when you click on Credit (=Write) you must add extra zeros at the end of track 2

2: Cardholders name; Use a random name, but always enter a name.

3: AID; For pos 31010 for ATM 41010

4: Country code and currency code are the same. Check out the list that comes with the software for all country codes.

5: PIN; Always enter a pin in the software. The pin is stored encrypted. Some pos systems check if there is a pin stored.

Now the masterpiece of X2 *ARQC calculator*

I made it easy on the software but in the software it is extremely difficult.

- First click on Master Key (Wait 3 seconds)

- Now click on generate ARQC (Wait 5 seconds before clicking CREDIT (=Write))

*** Use Cardpeek and check if the card is good. Try to find Track2.**

*** You can use the card several times, pos and ATM.**

*** Always format your cards with PAWS software.**

Good vendor for Track2: ICQ: jamfox
